

A simulated kiosk /
self-checkout area
for offline
customers who
prefer self-checkout
/ no human
interaction

A virtual stage
for company
presenters to
present live

A virtual space to preview and interact with physical products (eg. Holding a device, placing it in everyday environments like a desk etc.) — for customers seeking to get a “physical feel” of products before purchasing

thoughts -> Delivers info about products and planes, can implement the Q&A feature here as well. Might be hard to implement AI with all the product and plan knowledge

Host – AI assistant – that explains products/plans

thoughts -> Technical complex and will be difficult to implement and test within the sprint. Technically interesting but human hologram??

Face Recognition – Personalised User Experience

A face recognition feature that allows the system to recognise an authorised user through their camera and provide a personalised experience.

thoughts → Could improve user interaction and make the virtual representative feel more personalised. A basic face detection/recognition prototype could be developed and tested in the next sprint.

Face Recognition – User Authentication

Users can verify their identity using face recognition instead of relying only on traditional login methods.

thoughts → Provides a quick and convenient authentication method. Could be implemented as a simple prototype first, with security and privacy considerations explored later.

Face Recognition – Personalised Interaction

A system that can recognise a consenting user through their camera and use this to personalise their interaction with the virtual representative.

thoughts → Fits the goal of creating a more engaging and personalised experience. A basic face recognition prototype can be developed and tested in

2-way communication
system

AI intergated bitmoji calls,
with Looking glass screens

Primary user: General
public

Problem it solves: give
that feeling of talking with
person 3d

Personal Assistant 3D

AI: instead of a chat
you can have 3d
person talking to you.

USER: General Public

Problem: no longer
the boring chat app.

3D Gym AI coach: helping
having correct posture or
movements during
workouts:

User: General Public

Problem: you cant see the
correct posture in 2d
screen.
